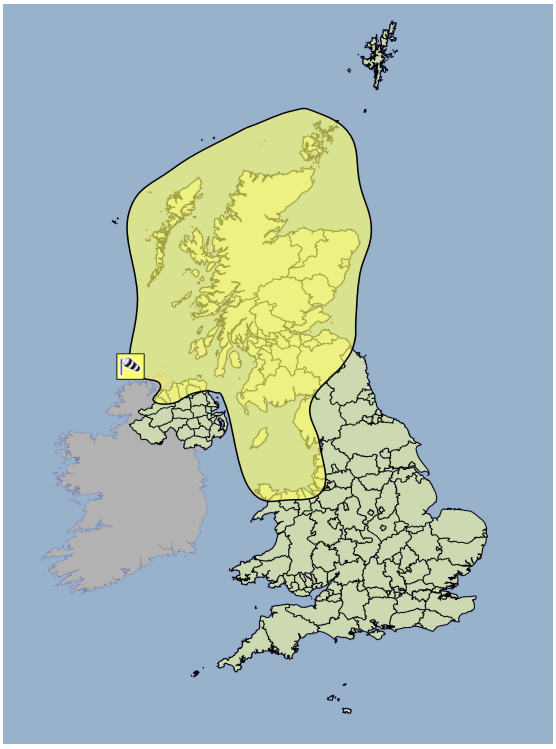
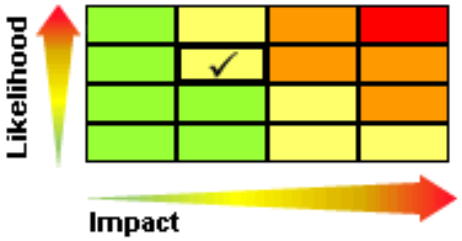
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep area of low pressure is expected to develop in the Atlantic on Sunday, tracking eastwards to be centred to the north of Scotland on Monday. This will bring some heavy rain on Sunday followed by squally showers on Monday.

A swathe of strong westerly winds is expected to develop later on Sunday, with the first peak in wind speed across Scotland on Sunday afternoon/evening. This may be followed by a lull inland overnight before renewed strength develops on Monday, by which time gusty winds may extend through the Irish Sea into coastal parts of northwest England and North Wales. Gusts of 50-60mph are likely, with the potential for 70mph across exposed Scottish coasts and hills, and a low risk briefly through the Central Lowlands of Scotland. However, some sheltered locations within the yellow area will miss the worst of the winds.

As is usual in this situation there is some uncertainty over the track and intensity of the depression, and this alert may be updated over the coming days.

The Met Office have issued a **Yellow Alert** of **Wind**

Valid from **15:00 on Sun, 15th Sep 2013** until **23:59 on Mon, 16th Sep 2013**

A spell of gale force westerly winds is expected later Sunday and through Monday across much of Scotland, the north of Northern Ireland, and then perhaps parts of northwest England and North Wales.

The public should be aware of the potential for some minor disruption to travel.
